# Omnitor eCtouch

Omnitor eCtouch®

eCtouch is an app designed to make it possible for people with disabilities to communicate remotely without any obstacles. With eCtouch, you communicate smoothly with your friends, family, authorities, colleagues and customers both at work and home. eCtouch is adapted for assistive technologies such as screen readers, screen magnifiers and braille displays. eCtouch also works with different types of relay services (remote interpreter services).

Total Conversation

eCtouch offers Total Conversation with simultaneous video, audio and real-time text in the call. Combine media as you prefer. You can use sign language, speech, lip-reading and text to clarify.

Platform Independent

Use eCtouch on your smartphone, tablet or computer with the same user interface on all devices. eCtouch supports all modern operating systems, including Windows, Android, iOS and iPad OS.

NOT!FY

NOT!FY is an external device used to make people with disabilities aware of incoming calls in several different ways e.g. with flashing lights. It is available as an extension to eCtouch.

Standards and Specifications

Session Initiation Protocol (SIP) - IETF RFC 3261
Total Conversation - ITU-T Rec. F.703
Real-Time Text - RFC4103 and ITU-T Rec. T.140
Audio, video and text codecs according to NG112 - ETSI EMTEL TS 103 479

About Omnitor

We work on accessibility issues and develop products that enable better communication between people. We offer innovative communication solutions suitable for everyone, but mainly for people with communication disabilities (e.g. sign language users and people with visual impairments). Our products follow open international standards and are non-proprietary, unlike many other software products for video communication over the internet.
